

Cost and payback: Sector Defense, Red Command, RON_India

What Sector Defense cost in Q3, what Red Command cost and has earned back, when Sector Defense could earn back its cost, and where the RON_India side project stands. USD, at 20.83 CZK/USD.

Sector Defense, Q3 cost \$83k to \$146k depending on how labour is counted; not launched yet	Red Command, cost vs. profit \$100k → \$151k our 50 % of the game's profit, split with the publishing sister company; paid back 1.5× in under 5 months	RON_India, net so far +\$38.6k \$40k received on about \$1.4k of cost: ROI 2,717 %
---	---	---

Sector Defense: Q3 cost

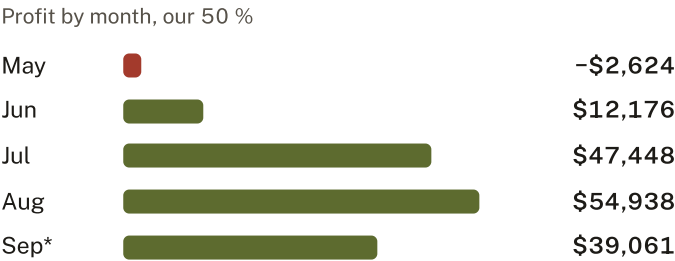

Labour plus 80 % (the Q3 focus share) of 500,000 CZK a month of other and fixed costs over 3 months = **\$57,609** in every row.

Labour counted as	Labour	Other + fixed	Q3 total
Manday estimate 1,596 h ÷ 8 = 199.5 mandays × \$125	\$24,942	\$57,609	\$82,551
Direct cost tracked hours × each person's hourly rate	\$35,546	\$57,609	\$93,155
80 % of all Q3 labour also covers untracked and "no task" time	\$88,867	\$57,609	\$146,476

1,596 h were logged to Voldemort in August and September by 8 people; nothing was logged to it in July. 1,681 of the company's 5,192 Q3 hours have no task, which is why the third row exists. UA spend for the launch (about €138k in month one, released in tranches) is not included; it is judged by the ROAS gates.

Red Command: cost and payback

Total dev cost incl. fixed costs	\$100,000
of which labour 866 h, Nov 2025 to Jun 2026	\$24,969
Game net revenue since launch ads + IAP, whole game	\$787,704
Game UA spend	-\$485,706
Game profit	\$301,998
Our 50 % of the profit	\$150,999
split with the sister company that publishes Red Command	

*September to the 20th (data lags about 3 days). Our half of the game's profit (net ads + IAP revenue minus UA); the other half goes to the publishing sister company.

Paid back in August, month 4 after the May launch: our cumulative half of the profit passed \$100k at \$111.9k. Our half runs at about **\$51k a month** (July and August).

Sector Defense: when could it earn its cost back?

Months after launch needed to cover the Q3 cost, if Sector Defense earns profit at the pace shown in each column. Scenarios, not a forecast.

Q3 cost	At RC's average \$32k / month, our half	At RC's run rate \$51k / month, our half	At \$100k / month mid of the \$50k–150k estimate
\$82,551 manday estimate	2.6 months	1.6 months	0.8 months
\$93,155 direct cost	2.9 months	1.8 months	0.9 months
\$146,476 80 % of all labour	4.5 months	2.9 months	1.5 months

The Red Command rates are what reaches us after the 50/50 split; the average includes the slow launch month, the run rate is July and August. The \$50k–150k per month range is Jirka's estimate of Sector Defense's potential. Every month of further development before launch adds roughly \$27k to \$49k to the cost.

RON_India: the solo side project

Cost so far (6 weeks)	USD	Payments	USD
David's time 6 weeks, solo	\$1,143	Prototype prepayment received	\$40,000
Claude account \$200 a month	\$277	Next 4 weeks offered, client decides within 14 days	\$60,000
Total cost	\$1,420	Full game \$800k with the \$100k credited, lands H1 2027	+\$700,000
		Net so far	+\$38,580
		ROI so far net ÷ cost	2,717 %
		ROI after the \$60k phase if David stays solo for the 4 more weeks at the same pace (cost \$2,367)	4,125 %

Full game (\$800k with \$100k credited): ROI depends on the production cost, which is not estimated yet. At 100 % markup the build must cost no more than \$400k; at 50 % markup, no more than \$533k.
